AVIARY

Bird Facts Scavenger Hunt

1. Find Sarah H. Suplina's Piece, "Acorn Nuthatch."

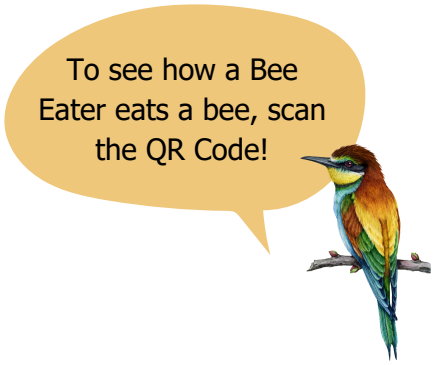

2. Did you know? An Emu egg can weigh up to 680 grams. That is the equivalent of about 12 chicken eggs! **How many emus can you find in the exhibit?**

3. Find Mandy Puttullo's piece, "Pheasant." Did you know? Sometimes pheasants will lay their eggs in other ground-nesting birds' nests and leave them for other birds to incubate and care for.

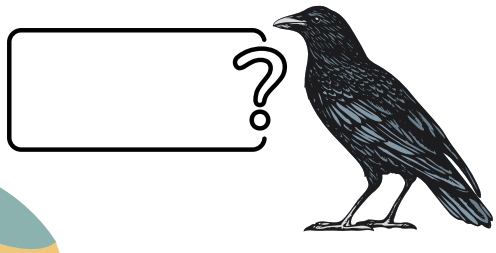

4. Find Laura Schlipf's piece, "Bee Eater." After a European Bee Eater catches a bee, they break the stinger off the bee by hitting it on a branch before they eat it.

5. Do you know how to tell a Crow and a Raven apart? Here are some of their defining characteristics...

Crow	Raven
Smaller- with a wingspan of 2.5 feet	Larger- with a wingspan of over 4 feet!
More rounded or fan-shaped tail feathers	Wedge-shaped or diamond-shaped tail feathers
Daintier, straighter bill	Thicker, heavier bill with a hook on top
More distinctive, cawing sound	Deeper, croaking call
More social, often found in flocks	Solitary, typically seen individually or in pairs

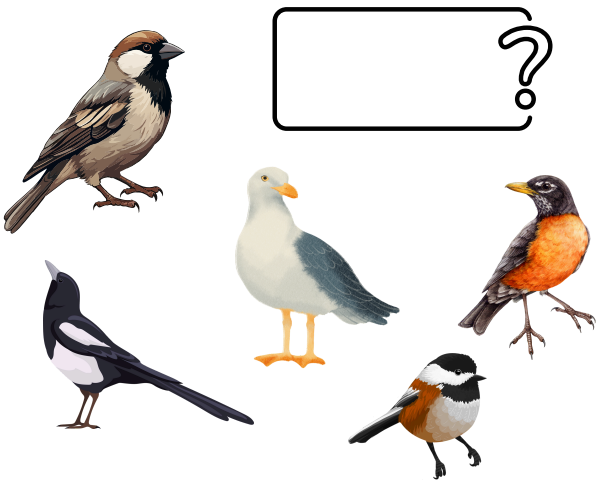

How many pieces of art have a crow or a raven in the exhibit?

Magpies are also in the "Corvid" family with Crows and Ravens!

6. Find Phyllis Cullen's piece, "Really Deep Southern Sunshine." Fun Fact! There are 18 different species of penguins!

Scan the QR Code to learn more about penguins!

7. How man birds can you find in the exhibit, that live in Utah?

8. Find Mita Giacomini's piece, "Repose." Did you know? A single Canada Goose can have between 20,000 and 25,000 feathers!

Scan the QR Code to hear what a Canadian goose sounds like!

9. Did you know that owls can rotate their heads up to 270 degrees? There is one owl in the exhibit *Aviary*, but it might be tricky to find!

Scan the QR Code to learn more cool facts about owls!

10. Draw below your favorite bird or piece of art that you saw in the exhibit!
